- 3. Interface Conditions

- 4. List of Commands
- 5. Command Descriptions
- 6. Table of Response Error Codes

\_\_\_\_\_\_

1. Projector Control

\_\_\_\_\_

NEC projectors make use of control commands that control the functions of the projector via connection with a personal computer or another device.

\_\_\_\_\_\_

2. Connection Method

The following 3 kinds of connection methods are available for sending and receiving control commands.

- 1. Serial connection using the serial port on the projector A serial cable is required.
- 2. USB connection using the USB port on the projector A USB cable is required.
- 3. LAN connection
  - 3-1. LAN connection using a wired LAN card
    A wired LAN card and LAN cable are required.
  - 3-2. LAN connection using a wireless LAN card

A wireless LAN card is required.

3-3.LAN connection using the LAN port on the projector

A LAN cable is required.

3-4. LAN connection using a wireless LAN unit

A wireless LAN unit is required

Status of supported connection

				·		•

- \* A USB cable is supplied as standard with the MT860/1060/1065/1075.
- \* The GT5000/6000 does not come with a USB cable.
- \* Note that a connection method using the supplied USB cable is not supported for the LT220/240/260.
- \* The serial cable, LAN card and LAN cable are separately sold.
- \* The WT610 replaced the WT610 and uses the same command set.

# (CAUTION)

Before making connections, be sure to invalidate the standby mode of the projector and set the "idle mode". The projector cannot use the control commands in the standby mode.

Setting method: Under projector [Projector Options] --> [Setup], enter a check for [Idle Mode] on Page 4.

# ( CAUTION ) (!1)

Before making connections, be sure to select [NORMAL] for [STANDBY MODE].

Setting method: From the projector's menu, select [SETUP] --> [OPTIONS(2)] --> [STANDBY MODE]--> [NORMAL].

# ( CAUTION ) (!2)

The projector accept the "POWER ON" command during [POWER-SAVING] mode for[STANDBY MODE].

# Supplement:

- (!1) Only the NP600/NP610/NP3200 series is compatible.
- (!2) Only the M300 series is compatible.

# [P350X/P350W/P420X Series]

# STANDBY MODE: "POWER-

SAVING"

		Wired	Wireless
	Serial	LAN	LAN
Control Command	port	port	unit
POWER ON	Yes	No	No

Yes: Supported No: Not supported

[P401W/P451W/P451W/P501X

Series]

[PA600X/PA550W/PA500U/PA500X Series]

[PX700W/PX750U/PX800X Series]

[PH1000U Series]

# STANDBY MODE: "POWER-

SAVING"

# STANDBY MODE: "NETWORK STANDBY"

		Wired	Wireless
	Serial	LAN	LAN
Control Command	port	port	unit
POWER ON	Yes	Yes	Yes

Yes: Supported No: Not supported

#### 3. Interface Conditions

\_\_\_\_\_

# Serial connection

\_\_\_\_\_

The communications method conforms to the RS-232C standard.

- \* A USB cable is supplied as standard with the MT860/1060/1065/1075.
- \* The GT5000/6000 does not come with a USB cable.
- \* Note that a connection method using the supplied USB cable is not supported for the LT220/240/260.
- \* The serial cable, LAN card and LAN cable are separately sold.

# (CAUTION)

Before making connections, set the standby mode of the projector to "NORMAL" or "Idol mode".

The projector cannot use the control commands in the power-saving condition, but the following model can use some control commands.

Baud rate: 38400 bps

(NP600 series, NP610 Series, VT60/VT70/VT80/VT90 series, VT700: 19200bps)

Data length: 8 bits
Parity bit: No parity
Stop bits: 1 bit
Communications mode: Full duplex

The control connector is described below.

# [ HT/LT/NP40/VT70/VT80/VT90/WT ]

The PC CONTROL connector is a mini DIN 8-pin connector.

```
1 To TxD of PC
2
3
4 To GND of PC
5
6
7 To RxD of PC
8
```

# [ GT/LT80/MT/NP1000/VT (except

VT70/VT80/VT90)/NP3150/NP905/NP600/NP4000/NP3250/NP610/NP2200/NP216/M300/P420/U300/V300]

The PC CONTROL connector is a D-SUB 9-pin connector.

```
1
2 To TxD of PC
3 To RxD of PC
4
5 To GND of PC
6
7 To CTS of PC
8 To RTS of PC
```

\_\_\_\_\_\_

<sup>\* 2, 3, 5, 6,</sup> and 8 are used inside the projector.

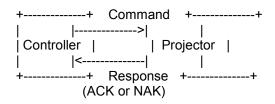

#### 4. Communication Frame

\_\_\_\_\_

On the LT/MT/SX/GT series projectors communication is done in a frame composed of header, data, and checksum.

The frame sent from the controller to the projector is referred to as a command, and the one sent from the projector to the command as an reply is referred to as a response.

The response has two types; Acknowledge (hereafter referred to as ACK) that recognizes a command and Negative Acknowledge (hereafter referred to as NAK) that fails to recognize a command.

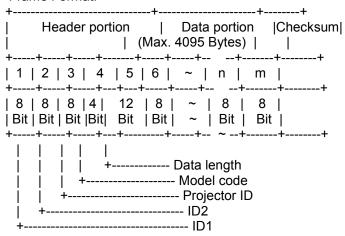

#### 4-1. Frame Format

\*

One frame comprises a header, a data portion, and a checksum.

# Frame Format:

#### \* ID1: (8 Bit)

This is an identification data assigned to each command.

#### Command:

This sets an identification data assigned to each command to send it. ( See each command description.)

# Response:

This returns the 6th bit of received ID1 as HIGH. For ACK it sends the 8th bit back as LOW (recognized); for NAK it sends the 8th bit back as HIGH (not recognized).

# \* ID2: (8 Bit)

This is an identification data assigned to each command.

# Command:

This sets an identification data assigned to each command to send it.

# ( See each command description.)

# Response:

This returns the value of received ID2 as is.

# \* Projector ID: (8 Bit)

This is a projector ID for the projector that sends and receives frames.

#### Command:

This specifies a projector ID for the projector that sends and receives commands. (individual notification)

Entering 00H or FFH becomes a common command for all the projectors. (broadcast notification)

This is convenient for controlling multiple projectors at the same time.

- \* When the controller is connected with the projector on a one-to-one basis Broadcast notification is recommended.
- \* When the controller is connected with multiple projectors To control a certain projector, use "individual notification". For all others "broadcast notification" is recommended.

# Response:

This returns the projector ID for a projector received regardless of individual notification or broadcast notification.

#### CAUTION:

To notify individually, specifying a model code from the following model codes is required.

\* Model code: (4 Bit)

This is a model code for the projector that sends and receives frames.

#### Command:

This specifies a model code for the projector that sends commands. (individual notification)

Entering 0000B or 1111B becomes a common command for all the projectors. (broadcast notification)

This is convenient for controlling multiple projectors at the same

- \* When the controller is connected with the projector on a one-to-one basis Broadcast notification is recommended.
- \* When the controller is connected with multiple projectors To control a certain projector, use "individual notification". For all others "broadcast notification" is recommended.

This returns the model code for a projector received regardless of individual notification or broadcast notification.

# Table of Model codes

0000B: (broadcast notification)

0001B: MT Series 0010B: LT Series 0011B: SX Series 0101B: GT Series

#### 1111B: (broadcast notification)

#### CAUTION:

- \* When the model code is set to "broadcast notification", the command becomes broadcast notification command, regardless of values of the projector ID.
- \* Model code is specified using upper ranking 4 bits of data length. The lower ranking 4 bits becomes the upper bits of data length.

# \* Data length: (12 Bit)

This is data length of data portion (unit:: byte).

#### Command:

This sets data length of data added to a command to send it. (See each command description.)

#### Response:

This sets data length of data added to a response to send it. (See each command description.)

#### CAUTION:

Data length is specified using total of 12 bits (0 - 4095) of 4 bits of the 4th byte and 8 bits of the 5th byte.\* The upper ranking 4 bits of the 4th byte is model code.

# \* Data portion

This becomes data of data length specified in the data length portion.

#### Command:

This sets data added to a command to send it. (See each command description.)

# Response:

This sets data added to a response to send it. (See each command description.)

# \* Checksum

This is lower ranking 8 bits of the sum total of the header and data portions of one transmit and receive data frame.

# 4-2. Data portion of response

# For ACK

This returns ACK without adding data portion to the command that does not request data.

This returns ACK with adding data to the data portion for the command that requests data.

#### For NAK

This adds a cause of not accepting the command to data portion to return it.

#### (Example) Power On

Command:

02H 00H FFH F0H 00H CKS

NAK:

A2H 00H 01H 20H 02H DATA01 DATA02 CKS

#### Data Contents

# DATA01 Error types

00H : Not supported 01H: Parameter error 02H: Operation mode error 03H: Gain-related error

04H: Logo transfer error

# DATA02 Error description

\* When not supported

00H: Unknown command

01H: The current model does not support this function. 02H: This model is not compatible with the Switcher. 03H: This model is not compatible with the PC Viewer.

\* When a parameter error occurs 00H: Unvalid values specified.

01H: Specified terminal is unavailable or cannot be selected

02H: Selected language is not available. \* When an operation mode error occurs 00H: Available memory reservation error

01H: External control working 02H: Operating memory

03H: Standby

04H: On Forced on-screen mute mode

05H: Link mode working

06H: Displaying a signal other than PC Viewer

07H:-No signal-

08H: Displaying a test pattern or PC Card Files screen.

09H: No PC card is inserted-0AH: Memory operation failed 0BH: Switcher mode working 0CH: Displaying the Entry List

\* When a gain adjustment error occurs

00H: Group number / sub category number is not correct.

01H: Selected gain is not available.

02H: Adjustment failed

\* When a logo transfer error occurs

00H: Start is not requested

01H: Cannot process due to storing

02H: Exceeds the total number of blocks required

at the time of start

03H: The block number of transferred data is not consecutive.

#### USB connection

This conforms to the USB1.1 standard.

Transfer speed: All speeds (supported) Endpoint: Control transfer Endpoint 0 Device class: HID class (Ver1.1)

HID: Human Interface Device

# **Connector Specifications**

- 1 VBUS (Power supply)
- 2 D- (- Signal) 3 D+ (+ Signal)
- 4 GND (Ground)

# LAN connection

-----

[Wired LAN port]

# LAN interface

Communication speed: Auto setting (10/100Mbps)

Certified standard: IEEE802.3 (10BASE-T)

IEEE802.3u (100BASE-TX, Auto-Negotiation)

#### A LAN connector (8 male RJ-45 connector)

1 TD+	Transmit data (+)
2 TD-	Transmit data (-)
3 RD+	Receive data (+)
4	Not used
5	Not used
6 RD-	Receive data (-)
7	Not used
8	Not used

# [Wired/wireless LAN card]

The LAN connections will differ depending on the commercial LAN card that is used.

- For information on supported LAN cards, visit: Global: http://www.nec-pj.com/

[Port Number]

The TCP port number used is "7142".

# 4. List of Commands

\* Example for command

Command name	Example

006. RUNNING SENSE 00H 81H 00H 00H 00H 81H 007. COMMON DATA REQUEST 00H C0H 00H 00H 00H C0H 009. ERROR STATUS REQUEST 00H 88H 00H 00H 00H 88H 015. POWER ON 02H 00H 00H 00H 00H 02H 016. POWER OFF 02H 01H 00H 00H 00H 03H

# Precautions with Inscriptions:

# (\*1) Projector ID

It is the value when forwarding a factory.

This reflects the "Projector ID" that has been set to the projector.

# (\*2) Model code: "xxH" inscription

This will differ depending on the projector.

# (\*3) Checksum: "CKS" inscription

This is the value of the lower 8 bits of the results calculated in byte units from all of the data up to the immediately preceding data.

Example:

20H 81H 01H 60H 01H 00H 03H

+ + + + + + + = CKS

#### (\*4) Response error number

This is the value of the error number at the time of an error.

See "NAK" of "6-2. Data portion of response".

# (\*5) Term "RGB" and "COMPUTER"

On the HT1100, VT770, LT245/ LT265/ LT280/ LT380, NP1000/NP2000, NP1150/NP2150/NP3150/NP3151W, NP1250/NP3250/NP3250W, NP1200/NP2200, NP4000/NP4001, NP4100/NP4100W,

NP905/NP901W/VT800, LT25/LT30/LT35, VT48/VT480/VT580, VT49/VT490/VT590/VT595/VT695/VT700, NP300/NP400/NP500W/NP500WS/NP600/NP600S,

NP310/NP410/MP410W/NP510/NP510W/NP610WS/NP610/NP610S.

NP40/NP50/NP60/NP41/NP61/NP62/NP43/NP64, P350X/350W/420X, P401W/P451X/P451W/P501X,

PA500X/500U/550W/600X, PX700W/750U/800X and PH1000U the term "RGB connector" has been changed to "COMPUTER".

#### (\*6) Term "DVI" and "COMPUTER"

On the LT380, NP1000/NP2000, NP1150/NP2150/NP3150/NP3151W, NP1250/NP2250/NP3250/NP3250W, NP1200/NP2200, NP4000/NP4001, NP4100/NP4100W,

NP300/NP400/NP500/NP500W/NP500WS/NP600/NP600S.

NP310/NP410/MP410W/NP510/NP510W/NP610WS/NP610/NP610S and VT595/VT695/VT700, the term "DVI connector" has been changed to "COMPUTER".

# 037. INFORMATION REQUEST

Function:

This command acquires the projector information.

Command:

03H 8AH 00H 00H 00H 8DH

Response: At the time of a success

23H 8AH 01H xxH 62H DATA01 .. DATA98 CKS (\*3)

(\*1) (\*2)

# **Data Portion Contents**

DATA01 .. 49 : Projector name (NULL termination character string)

DATA50 .. 82 : Reserved

DATA83 .. 86 : Lamp Hour Meter (second) (!)

DATA87 .. 90 : Filter Usage (second) DATA91 .. 94 : Panel Usage (second) DATA95 .. 98 : Projector Usage (second)

Response: At the time of a failure

A3H 8AH 01H xxH 02H DATA01 DATA02 CKS

(\*1) (\*2)

(\*4)

(\*3)

# Supplement:

(!) Lamp Hour Meter

This is the timer for normal lamp mode conversion.

Lamp Timer Acquisition Examples

DATA83 DATA84 DATA85 DATA86 : Lamp Timer

00H 00H 00H 00H: Total 0 seconds

C0H 52H 00H: Total 5400000 seconds/3600 = 1500 hours 65H 00H 00H: Total 5760000 seconds/3600 = 1600 hours E4H 57H

Calculator Procedure

- 1) Set calculator to HEX
- 2) Punch in DATA86 DATA85 DATA84 DATA83 (005265C0)
- 3) Change from HEX to Decimal value will change to 5400000 seconds

# 037-1. LAMP INFORMATION REQUEST

This command acquires the lamp information (in terms of Normal mode (values) of projector.

#### Command:

03H 8CH 00H 00H 00H 8FH

Response: At the time of a success

23H 8CH 01H xxH 10H DATA01 .. DATA16 CKS

(\*1) (\*2)

(\*3)

<sup>\*</sup> The projector's hours of use is displayed in terms of Normal mode values. It is also displayed with truncated a number after decimal point.

#### **Data Portion Contents**

-----

DATA01 .. 04 : Lamp Hour Meter(Normal mode) (second)

DATA05 .. 08 : Reserved

DATA09 .. 12 : Lamp Use Warning Starting Time(Normal mode) (second)

(\*3)

# 037-4. LAMP INFORMATION REQUEST 3 This command acquires the information on the projector lamp in Eco mode. Command: 03H 96H 00H 00H 02H DATA01 DATA02 CKS (\*3) **Data Portion Contents** DATA01 Target 00H: Lamp1 01H: Lamp2 DATA02 item 00H: Lamp Hour Meter (second) (!) 01H: Lamp usage time (second) (!!) 04H: lamp remaining amount until lamp warning message (100% to -10%) 05H: Lamp counter (Normal mode) (second) (!!!) 06H: Lamp counter (Eco mode) (second) (!!!) 08H: Remaining time until lamp warning message starts to appear (in terms of specified values) 09H: Remaining time until lamp warning message starts to appear (in terms of Normal mode values) 0AH: Remaining time until lamp warning message starts to appear (in terms of Eco mode values) 10H: Remaining time until inhibition of lamp usage (in terms of specified values) 11H: Remaining time until inhibition of lamp usage (in terms of Normal mode values) 12H: Remaining time until inhibition of lamp usage (in terms of Eco mode values) Response: At the time of a success 23H 96H 01H xxH 06H DATA01 .. DATA06 CKS (\*1) (\*2) (\*3)**Data Portion Contents** same values as DATA01 of the command DATA01 DATA02 same values as DATA02 of the command DATA03 .. 06 Acquired information Response: At the time of a failure A3H 96H 01H xxH 02H DATA01 DATA02 CKS (\*1) (\*2) (\*4) (\*3) Supplement: \* In case of acquiring lamp's use of hours

03H 96H 00H 00H 02H 00H 01H 9CH

Example of acquisition

DATA03 DATA04 DATA05 DATA06: lamp's use of hours

50H 46H 00H 00H: 18000 seconds

# Calculator Procedure 1) Set calculator to HEX

- 2) Punch in DATA06 DATA05 DATA04 DATA03 (00004650)
- 3) Change from HEX to Decimal value will change to 18000 seconds

Lamp's use of hours = 18000/3600 = 5 hours

\* In case of acquiring the remaining time until lamp warning message starts to appear (in terms of specified values)

03H 96H 00H 00H 02H 00H 08H A3H

Example of acquisition

DATA03 DATA04 DATA05 DATA06: Remaining time

40H 7EH 05H 00H: 360000 seconds

#### Calculator Procedure

- 1) Set calculator to HEX
- 2) Punch in DATA06 DATA05 DATA04 DATA03 (00057E40)
- 3) Change from HEX to Decimal value will change to 360000 seconds

Remaining time until lamp warning message starts to appear = 360000/3600= 100 hours

(!) Lamp Hour Meter

This is the timer for normal lamp mode conversion.

(!!) Lamp usage time

This is the lamp total usage. It is displayed in the projector's menu.

(!!!) NP4000/4001, NP4100/4100W: This function is not supported.

# 037.6. CARBON SAVINGS INFORMATION REQUEST

\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*

This command acquires the Carbon Saving values on the projector.

Command:

03H 9AH 00H 00H 01H DATA01 CKS

(\*3)

Data Portion Contents

DATA01 Acquirement items 00H: Total Carbon Savings

01H: Carbon Savings during operation

Response: At the time of a success

23H 9AH 01H xxH 09H DATA01 to DATA09 CKS

(\*1) (\*2) (\*3)

Data Portion Contents

DATA01 Same as DATA01 of the transmit data

DATA02 to 05 Carbon Savings (Kilogram Maximum: 99999[kg]) DATA06 to 09 Carbon Savings (Milligram Maximum:999999[mg])

Response: At the time of a failure

A3H 9AH 01H xxH 02H DATA01 DATA02 CKS

(\*1) (\*2) (\*4) (\*3)

Supplement:

**Example for Total Carbon Savings** 

DATA02 DATA03 DATA04 DATA05: Kilogram

9CH 09H 00H 00H : 2460 [kg]

DATA06 DATA07 DATA08 DATA09 : Milligram 06H F9H 00H 00H : 63750 [mg]

**Total Carbon Savings** 

= (2460 \* 1000) + (63750 / 1000) = 2460063.75 [g]

= 2460 + (63750 / 1000 / 1000) = 2460.06375 [kg]

#### 037-7. LAMP INFORMATION REQUEST 4

Function:

This command acquires the information on the projector lamp.

Command:

03H 9BH 00H 00H 03H DATA01 DATA02 DATA03 CKS

(\*3)

Data Portion Contents

\_\_\_\_\_\_

## 6. Response

\_\_\_\_\_

This returns ACK without adding data portion to the command that does not request data.

This returns ACK with adding data to the data portion for the command that requests data.

This adds a cause of not accepting the command to data portion to return it.

(Example) Power On

Command:

02H 00H 00H 00H 00H CKS

Response:

A2H 00H 01H 40H 02H DATA01 DATA02 CKS

\_\_\_\_\_\_

7. Table of Response Error Codes

.....

<sup>\*</sup> At the time of a success( ACK )

<sup>\*</sup> At the time of a failure( NAK )

DATA01	DATA2	
	Error	
Error Types	description	Error contents
00H	00H	Unknown command.
00H	01H	This current model does not support this function.
01H	00H	Invalid values specified.
01H	01H	Specified terminal is unavailable or cannot be selected.
02H	03H	Setting not possible.
02H	0DH	Power Off inhibited.

## 050. REMOTE KEY CODE

#### Function

This command sends remote control key codes of projector.

## Command:

02H 0FH 00H 00H 02H DATA01 DATA02 CKS (\*3)

## **Data Portion Contents**

## 077. MUTE CONTROL

#### **Function**

This command controls the mute of picture, sound and on-screen.

#### Command:

02H 1AH 00H 00H 02H DATA01 DATA02 CKS (\*3)

## **Data Portion Contents**

.....

DATA01 Setting items

00H: Picture 01H: Sound 02H: On-Screen

DATA02 Setting Value

00H : OFF 01H : ON

Response: At the time of a success

22H 1AH 01H xxH 01H DATA01 CKS

(\*1) (\*2) (\*3)

## **Data Portion Contents**

\_\_\_\_\_

DATA01 Results

00H : Normal 01H : Error

Response: At the time of a failure

A2H 1AH 01H xxH 02H DATA01 DATA02 CKS (\*1) (\*2) (\*4) (\*3)

## Supplement:

\* Sound mute is cancelled in the following cases:

Input connector switching Video signal switching Volume adjustment

### 078-1. SETTING REQUEST

#### Function:

This command acquires the function information of projector.

### Command:

00H 85H 00H 00H 01H 00H 86H

Response: At the time of a success

20H 85H 01H xxH 20H DATA01 .. DATA32 CKS

(\*1) (\*2) (\*3)

## 305-3. PROJECTOR INFORMATION REQUEST

Function:

This command acquires basic operation states of projector.

Command:

00H BFH 00H 00H 01H 02H C2H

Response: At the time of a success

20H BFH 01H xxH 10H DATA01 ... DATA16 CKS

(\*1) (\*2) (\*3)

### **Data Portion Contents**

DATA01 02H fixed

DATA02 **Projector Processing Status** 

> 00H : Idle 04H: Power On 05H: Cooling

06H : Idle(Error Standby) Other: Not Support

Other than above : (nondisclosure)

Internal use of code during a state transition period

DATA03 **Indicate Contents** 

00H: Picture signal displaying

01H: No Signal

02H: Viewer displaying 03H: Test Pattern displaying

04H: LAN displaying

05H: Test Pattern (User) displaying 10H: Signal selection in progress

Other: Not Support

DATA04 Select source input type 1

> 01H:1 02H: 2 03H:3 04H:4 05H:5

Other: Not Support

DATA05 Select source input type 2

01H: COMPUTER (RGB)

02H: VIDEO 03H: S-VIDEO 04H: COMPONENT 05H: Reserved 06H: DIGITAL 07H: VIEWER

08H: SLOT1 09H: SLOT2 0AH: SLOT3

0BH: SLOT4 0CH: DIGITAL2 0DH: SCART 10H: AUTO

FFH: Not Source Input Other: Not Support Indication signal type

DATA06

(Effective only when Select source input type 2 is 02H or 03H)

x0H: NTSC3.58 x1H: NTSC4.43 x2H: PAL x3H: PAL60 x4H: SECAM x5H: B/W60

x6H: B/W50 x7H: PALNM x8H: NTSC3.58 LBX

x9H: NTSC3.58 SQZ xAH: COMPONENT(60Hz) xBH: COMPONENT(50Hz)

xCH: Un known xDH: NTSC xEH: PAL-M xFH: PAL-N

FFH: Not Video Input Other: Not Support

DATA07 Picture Mute

00H: OFF

01H: ON

DATA08 Sound Mute

00H: OFF 01H: ON

DATA09 On-screen mute

> 00H: OFF 01H: ON

DATA10...DATA16 Reserved

Response: At the time of a failure

## 6.1. Response

-----

\* At the time of a success (ACK)

This returns ACK without adding data portion to the command that does not request data. This returns ACK with adding data to the data portion for the command that requests data.

\* At the time of a failure (NAK)

This adds a cause of not accepting the command to data portion to return it.

(Example) Power On

Command:

02H 00H FFH F0H 00H CKS

NAK:

A2H 00H 01H 20H 02H DATA01 DATA02 CKS
